For heavy weight palletized cargo without a consolidation point, the supplier must consolidate and arrange shipment 1-2 times a week at most;
For small parcel (carton) shipments by express service, supplier must consolidate all daily shipments into no more than 1 shipment per day. The supplier must follow Celestica Suzhou routing guide instructions based on total daily shipments instead of individual Purchase Orders with consolidating multiple PO's into 1 (one) consolidation under 1 (one) airway bill.

Multiple small packages shipped on the same day to Celestica must be consolidated into one shipment. The supplier is required to combine multiple part numbers and purchase orders in one shipping container/on one pallet/ one AWB/HAWB

Shipments of comparable size, height, and density that are difficult to handle, and for which the combined gross weight exceeds 150 pounds (68 kg) or are oversized should be palletized.

Consolidate items shipped on one day to the same destination on one pallet, one bill of lading, one air waybill or ocean bill of lading. The Carrier to be used for same day consolidated shipment will be based on the weight breaks listed below:

Below is the standard freight routings. Please coordinate all expedites, express freight and ocean shipments with Celestica Suzhou logistics contacts.

For the areas with no consolidation point, it's the suppliers responsibility to consolidate shipments by 2-3 times a week to reduce Celestica custom declaration charge.

Failure to comply with these instruction may cause extra cost and will be charged back to the supplier.

All shipments including Chicago/Los Angeles consolidation point shipments must include a commercial invoice. Please see international documentation requirements below.

See Chicago/Los Angeles consolidation point listed below for all USA origin shipments.

AIR shipment weights are based on chargeable weights (max of dim weight and actual weight) when determining mode of transportation. See Page 3 for weight definitions and calculation examples

Weight Definitions and Calculations

- The weight of a package using a standard scale rounded to the next full pound / KG. (Example: a 12 1/2 pound carton will have an "actual weight" of 13 pounds).

- A calculation used to reflect a package's density. The International Air Transport Association (IATA) volumetric standards is used to determine the dimensional weight.

- The chargeable weight of the shipment will be the higher of the volumetric weight or the gross weight.

How to Calculate Volumetric Weight (International air shipments)

International Shipments Calculation with Freight Forwarders (Aqility, CEVA and Panalpina)

Imperial (IN / LBS)

$$\frac{\text{Length} \times \text{Width} \times \text{Height}}{166} = \text{Cubic Inches}$$

166 (International)

Metric (CM / KG)

$$\frac{\text{Length} \times \text{Width} \times \text{Height}}{6000} = \text{Cubic Centimetres}$$

6000 (International)

International Shipments Calculation with DHL Express, TNT Express and FedEx Express

Metric (CM / KG)

$$\frac{\text{Length} \times \text{Width} \times \text{Height}}{6000} = \text{Cubic Centimetres}$$

6000 (International)

International Shipments Calculation with DHL Freight and TNT Economy

Metric (CM / KG)

$$\frac{\text{Length} \times \text{Width} \times \text{Height}}{4000} = \text{Cubic Centimetres}$$

4000 (International)

Identifying what your chargeable weight will be:

Example - Imperial Calculation

Actual Pallet Weight = 250lbs

Pallet Dimensions = 48 x 40 x 50in

Pallet Volumetric weight = (48 x 40 x 50) / 139 = 690.65lbs

Example - Metric Calculation

Actual Pallet Weight = 150kg

Pallet Dimensions = 122cm x 102cm x 120cm

Pallet Volumetric weight = (122x102x120) / 5000 = 298.66kg

Chargeable Weight of shipment = 691lbs

Chargeable Weight of shipment = 299kg

How to Calculate Volumetric Weight (USA Domestic air shipments)

Imperial (IN / LBS)

$$\frac{\text{Length} \times \text{Width} \times \text{Height} = \text{Cubic Inches}}{166(\text{USA Domestic})}$$

Example - Imperial Calculation

Actual Pallet Weight = 250lbs

Pallet Dimensions = 48 x 40 x 50in

Pallet Volumetric weight = $(48 \times 40 \times 50) / 166 = 578.31\text{lbs}$

Chargeable Weight of shipment = 578.5lbs

or

Example - Imperial Calculation

Actual Pallet Weight = 600lbs

Pallet Dimensions = 48 x 40 x 50in

Pallet Volumetric weight = $(48 \times 40 \times 50) / 166 = 578.31\text{lbs}$

Chargeable Weight of shipment = 600lbs

Length or Girth - (For Domestic USA and International shipments with FedEx, Air and Ground)

Your Chargeable Weight will be based on the greater between the actual package weight and the Length and Girth of the package.

Length - is the largest dimension of the carton or object being shipped. For example, if the package is very tall (height is greater than the base) use the height as the length.

Girth - is the sum of 2 times the width plus 2 times the height or the measurement around the largest area of the cylinder (see illustration).
