

Global Energy Policy

At Celestica, we're dedicated to energy conservation. Our Global Energy Policy drives our daily operations and leads to real improvements in how we efficiently use and save energy, year after year.

Our Commitment

We set the example. As an energy steward in our communities, we make conscientious and responsible choices that contribute to a sustainable future.

We do more, with less. Our programs lead to increased energy efficiency and reduction in energy consumption across our business.

We raise the bar. We're committed to continually improving our energy performance every year. We do this by setting new objectives and targets annually and by ensuring the availability of the information and resources necessary to achieve results.

We problem-solve for the future. Energy performance improvement is a high priority so we support the purchase, development and design of energy products and services that lead to a better future.

We champion the rules. We comply with applicable legislation, regulations and other requirements that improve energy use, consumption and efficiency.
