

Global Environmental Policy

Environmental stewardship is a priority at Celestica. Our environmental policy drives everything we do—from how we conduct our operations to the management practices we follow, each and every day.

Our Commitment

We set the example. As an environmentally committed neighbour, we are focused on environmental protection. We're mindful of the conditions that impact the environment and act responsibly.

We strive for progress. Our organization is continually improving its environmental management system to enhance our environmental performance.

We drive towards results. Our people set environmental objectives and targets each year, participate in conservation activities and manage prevention of pollution programs.

We problem-solve for the future. We're partnering with organizations to solve the world's environmental challenges through technology. We also develop safe, energy-efficient and environmentally-conscious products and manufacturing processes.

We champion the rules. We fulfill our compliance obligations, other specific commitments, and conduct rigorous self-assessments that benefit us all in the long run.
